About us

Where durability meets daring design, creating stunning aesthetics.

At Icon, we are passionate about transforming spaces with innovative, high-quality surface solutions. With years of expertise, we craft designs that blend durability with stunning aesthetics, elevating every interior. Our vision is to bring timeless elegance and modern sophistication to homes, offices, and commercial spaces alike. Committed to sustainability, we use eco-friendly materials that ensure long-lasting beauty. Innovation drives us — from vibrant textures to sleek finishes, we stay ahead of design trends. Customer satisfaction is at our core, and our dedicated team ensures every project exceeds expectations. Join us in redefining spaces with surfaces that inspire and impress. Together, let's create environments that truly reflect your style.

TECHNICAL SPECIFICATIONS

PROPERTIES	SPECIFIED VALUES AS PER IS 2046-1995 TYPE S,VGS	ICON CONFIRMS
Thickness	1.0mm (± 10%)	1.0mm (± 10%)
Resistance to Surface Wear	> 150(revolutions)	✓
Resistance to immersion in boiling water -Mass increase (%) -Thickness increase -Appearance	 10.0%(Max) 11.8%(Max) Not worse than 4	 ✓ ✓ ✓
Dimensional stability at deviated temperature -Longitudinal (%) -Transverse (%)	 0.55% (Max) 1.025%(Max)	 ✓ ✓
Dimensional stability at 200C -Longitudinal (%) -Transverse (%)	 0.375%(Max) 0.60% (Max)	 ✓ ✓
Resistance to impact by small diameter ball	20 N (Min)	✓
Resistance to cracking	Not worse than 4	✓
Resistance to scratching	1.75 N (Min)	✓
Resistance to staining	Not worse than 5	✓
Resistance to color change (Wool standard) - In Xenon ARC light - In Enclose Carbon ARC light	 Not worse than 6 Not worse than 5	 ✓ ✓
Resistance to steam	Not worse than 4	✓
Appearance	Should be free from foreign particles	✓

APPLICATION GUIDELINES

CAUSES AND RECOMMENDATION FOR AVOIDING FAILURES ARE:
- USE GOOD QUALITY PLYWOOD AND ADHESIVE
- THE SURFACE TO BE BONDED SHOULD BE FREE FROM OIL/GREASE/DUST AND EXCESS MOISTURE
- INSUFFICIENT AMOUNT OF ADHESIVE ON EITHER OR BOTH THE SURFACE TO BE BONDED

When ready for bonding the spread film of most contact adhesive will exhibit a uniform semi-gloss appearance over the entire surface of the material to be bonded. Marked variation in appearance will generally indicate an improper or non-uniform bonding in those areas where insufficient adhesive has been applied. If this occurs, re-coating the surface should achieve a uniform coating. Double coating the edges with adhesive is advisable because of the higher porosity of the substrate edge.

- INSUFFICIENT BONDING PRESSURE
To ensure intimate contact necessary for an adequate bond, sufficient pressure should be applied over the entire area using as much pressure as possible without damaging the assembly. Pinch rollers (rotary press) and heavy weighted rollers are ideal. Hand pressure rolling is adequate, provided the operator exerts maximum pressure by means of a two-handled or single long-handled roller. The rollers should be of steel or hard solid rubber (50-80 diameter) and not over 75mm (3 inches) wide. Hand rolling should be repeated twice.
- BONDING WHEN ADHESIVE SURFACE IS OVER-DRY OR UNDER-DRY
Care should be taken to follow the manufacturer's recommendations concerning the allowable tack range of the adhesive. If the assembly is done before the adhesive is dry or after the allowable open time is exceeded, then the bonding result may be unsatisfactory.
- BONDING OF SURFACE UNDER 21 deg. C (70 deg. F)

Unless otherwise indicated by the manufacturer the temperature of the gluing area and all materials should be 21 deg. C (70 deg. F) or above.
- BONDING OF SURFACE WHERE HUMIDITY IS TOO HIGH
Experience has shown that when the relative humidity is above 80 percent at temperatures of 21 deg. C (70 deg. F) or lower moisture may condense on the surface during drying (Known as "blushing ") and will prevent an acceptable bond. Hot spray or forced air drying may be used to prevent this condition.
- IMPROPERLY PREPARED OR DIRTY GLUING SURFACES
The surfaces should be clear, dry and free of oils or other contaminants, such as dust, loose sand particles, and so forth. The adhesive film should have full contact with the surface to which it is applied in order to give maximum adhesion.
- FIELD BONDING OF OVERSIZED SHEETS
It is recommended that the maximum sheet size used for vertical field application be limited to 610x2400mm (2x8 Feet). If larger panels are required, these should be fabricated in the shop.
- UNDER PRESSURE
After bonding, even pressure of 100 gm/ sq.ft. must be maintained for 6 to 8 hours.

Notes:

• It is recommended to check the laminate sheet before fixing.
• No complaint shall be entertained on laminates already fixed.
• In case of any complaint, the company's liability is limited to the cost of the laminate sheet only.
• ICON Laminates reserves the right to delete, amend either totally or partially, any of the design, finishes, references and other technical specifications contained in this catalogue at any time.
• The sample Swatches in the catalogue shows Color Pattern and finishes only. It does not show the actual thickness of the product.

Note :
१. लैमिनेट लगाने से पहले पूरी तरह से जाँच लें।
२. लैमिनेट लगाने के बाद बबल, क्रैक और दरार हो तो कंपनी की कोई गेरेन्टी नहीं रहेगी।
३. कोई भी परिस्थिति में कंपनी की वारंटी लैमिनेट तक सीमित रहेगी।

MAKE BY

CHECK BY

A LOOK AT HOW YOU CAN LOOK AFTER OUR LAMINATES

Do not place frying pans or dishes directly from the oven or cook-top on the Laminate surface. Protect the surface from heat generating appliances.

Do not use knives, keys or other sharp objects directly on the decorative surface. A chopping board or counter saver is recommended.

To clean the surface, use a damp cloth or sponge and a mild soap or detergent.

Difficult stains such as coffee or tea can be removed using a mild household cleaner or detergent and a soft-bristled brush, repeat if necessary.

Acidic or abrasive cleaners can damage Laminate surfaces; please do not use them.

Toilet cleaners contain harsh chemicals that can cause permanent damage. If spills occur, please wipe immediately, wash the surface with soapy water and rinse several times.

If a stain persists, use a paste of baking soda and water and apply with a soft-bristled brush. Light scrubbing with about 10 to 20 strokes should remove most stains. Although baking soda is a low abrasive, excessive scrubbing or exerting too much force could damage the decorative surface.

Steel wool and other abrasive pads can damage Laminates. Do not use them for cleaning and do not place steel wool pads on your counter-tops as the metal can rust and leave stains.

Hair, textile and food dyes can cause permanent stains. If any dye should happen to inadvertently spill, please wipe it immediately with a dish-washing detergent or an all-purpose cleaner.
